NATUKUNDA PORRATE	24/U/26968/PS	2400726968
LYAKA MARION	24/U/26865/EVE	2400726865
MUYOMBA MOSES	23/U/24735/EVE	2300724735

DEVELOPMENT OF A LOCAL RESTAURANT WEB APPLICATION

Case:

A local Restaurant called Domain Restaurant wants to promote and improve its services by collecting and acting on customer feedback.

Purpose:

The website will allow customers to easily submit their feedback and reviews about the services of the restaurant whereby the management will have an Admin panel to view and manage all customer feedback, helping them to respond quickly to customer concerns, hence improving overall services.

Website Structure

Home page:

This page will act as our welcome page which will give a client an overview of what the website holds, giving an introduction of our restaurant and a call to action to check meals offered.

About page:

This page will give customers the opportunity to get information about the restaurant's history, and the introduction to the restaurant's team. In addition, it will also give a preview of stats basing on feedback to improve services insights.

Contact page:

This page will give our customers a way to reach us just in case of anything, therefore we shall have our business telephone numbers, our social media accounts for example WhatsApp, Facebook, X ETC on this page.

This will also be our data collection page where customers can submit their Feedback.

Admin Dashboard:

This will be a page where Admin or management will view, edit, update and delete feedback from customers.

Design and Features

Colours:

Our website will have elegant and attractive colours for the restaurant for example white, grey, small green with a clean background.

Layouts:

Our layouts will have responsive designs hence we shall use Bootstrap, Navigation bar on top, footer at the bottom

Key features:

User-friendly feedback form with fields for name, email, and comment.

Admin dashboard with a table of all feedback and actions for example edit, delete, and create new users.

Responsive Design. This works perfectly on mobile devices since most customers will submit using their phones.
